---

**Summary** As a results-focused product manager, I'm at my best when I can work closely with a team to build products that solve customer problems. I have direct experience taking products from initial conception through the design phase to successful release. I have a deep appreciation for Agile development methodologies and I enjoy working directly with developers to define how new features work and what they look like.

---

**Experience** **Eleven, Inc** March 2016 to Present  
Product Manager, APIs and Integrations

As the product manager in charge of APIs and Integrations, I'm responsible for Eleven's interfaces to external hardware and software systems. In my role, I work with internal and external development teams to build solutions that are maintainable, reliable and performant. Specific responsibilities include: gathering, documenting and prioritizing product and customer requirements, making decisions on user interface designs and usability, helping to define the product vision and architecture, and working closely with engineering, sales, marketing, and professional services to ensure smooth delivery and customer satisfaction.

---

**Eleven, Inc** February 2011 to February 2016  
Software Engineer

As the first member of the front-end team, I led the design and development of Eleven's user-facing applications. I transitioned a legacy ASP.NET front-end into a modern, responsive application that is fully customizable. I was also responsible for the front-end for Eleven's core platform (ElevenOS) and building out a team of front-end developers to manage and add to its many features.

---

**DECK Monitoring** September 2010 to March 2011  
Junior Engineer

As a Junior Engineer, I was responsible for deploying and configuring solar monitoring solutions through DECK's cloud-hosted platform. This involved configuring hardware and software for customers in the field and supporting customers with technical problems.

---

**Volunteering** **Hack Oregon Volunteer** April 2016 to June 2016

Front End Web Developer, 2016. Helped architect, design, and build PlotPDX.org as part of the Urban Development team.

---

**Education** **Lewis & Clark College, Portland Oregon** 2008  
Bachelor of Arts, Economics  
Concentration in Computer Science
